FERMACELL

High Performance Dry Lining

Xella

FERMACELL: setting standards

Modern construction needs modern materials. Design innovation combined with increasing pressure from Building Regulations means that materials must save time and money on site and offer technically superior solutions. FERMACELL is one such material. A high performance multi-purpose building board that when installed combines the properties of solid blockwork with the speed and flexibility of conventional drywall techniques, and which lets the designer use radical solutions in internal space planning.

Composition

FERMACELL is produced using ordinary materials in an extraordinary way. Recycled gypsum, recycled cellulose fibres from paper and recycled water are combined to form a homogenous mass, which is then formed into a dense sheet material. After drying, the large format boards are cut to size.

The manufacturing technique is not only unique because of the material it produces, but also due to the fact that the process itself is fully recycling – all by-products are fed back into the system, ensuring no waste is produced. Both the product and the process have been awarded the coveted Rosenheim Institute of Construction Biology and Ecology certificate.

FERMACELL, the multi-purpose board

General Properties and Applications

There are a bewildering array of construction systems and techniques to consider when specifying internal finishes. For partitions, this is most apparent when the properties required of the finished wall call for more than one type of building board to be used in the construction. Hotel bathrooms, for example, often require Moisture Resistance with Acoustic Insulation and Fire Protection. Hospitals will add Impact Resistance and flexibility in accepting wall mounted fittings to this. These criteria almost always demand compromise solutions involving specialist board selection and composite layers, with often costly and time consuming consequences. This in turn creates the potential for confusion, both at detailed drawing stage and on site. Additionally, multiple layering inevitably means thicker walls.

FERMACELL offers a unique, single point solution to these problems, combining high levels of Fire Resistance, Acoustic Insulation and Impact Strength with exceptional Screw Holding ability and inherent Moisture Resistance.

From Commercial Projects through to DIY, FERMACELL can reap rewards. FERMACELL requires minimal additional work prior to painting and decorating. Wallpapers and tiles can be applied direct to the board-, and plaster smooth finishes, which are ready to paint in about 45 minutes can be achieved by non-skilled trades using our FST system.

The end result is a finished partition that combines the properties associated with solid masonry with the flexibility of drywall, in a construction that is often thinner, quicker and cheaper to install than both. Using a multi-purpose board that eliminates unnecessary wet trades makes practical, technical and commercial sense.

FERMACELL partitions using single layer 12.5 mm boards achieve a Severe rating to BS5234:Part 2.

Load-carrying capacity of FERMACELL walls

FERMACELL gypsum-fibreboards (thickness) [4]	Load-bearing strength in kg [1]				
	Picture hooks fixed by nails			[2] Screw with continuous thread 5 mm dia.	[3] Toggle Bolt
					
10 mm	15	25	35	20	40
12.5 mm	17	27	37	30	50
12.5 + 10 mm	20	30	40	35	60
15 mm	18	28	38	30	55
18 mm	20	30	40	35	60

(1) Safety factor: 2 (Static load with relative humidity of up to 85 %).
(2) Depth of cupboard or shelves: max. 350 mm.
(3) Standard toggle bolt with > 4 mm dia. screw.
(The toggle bolt manufacturer's instruction should be observed.)
(4) Maximum stud centres = 50 x board thickness.
N.B. Where fixings are less than 500 mm apart, reduce the load per fixing by 50 %.
If a stud support separates the fixings, then use the full load bearing strength shown above.

FERMACELL for walls and ceilings

FERMACELL is available in standard sizes as well as custom formats up to 6000 mm x 2540 mm

Wallboard thicknesses range from 10 mm to 18 mm. This choice gives both specifier and installer the ability to select the most appropriate product to speed installation and eliminate waste.

One-Man board

One-Man boards are available in 1500 x 1000 mm and 1200 x 1200 mm.

Standard size boards

Standard size boards in thicknesses from 10 mm to 18 mm are available. Special sizes to eliminate waste and reduce jointing are available to order.

Tapered Edge Boards

Tapered edge boards are available with 2 or 4 sided tapered edges for conventional dry lining installation techniques.

Modular Building

For factory based modular construction and timber frame housing applications, boards up to 6000 x 2540 mm can be supplied.

Accessories

A full range of proprietary accessories is supplied to ensure perfect results every time.

FERMACELL at a glance:

Manufactured from recycled materials.

Environmentally Certified

Sound Insulating

Simple Party Wall constructions.

Impact Resistant

Ready to Decorate

Eliminates double layering or use of Sheathing Ply.

Ready to accept paint, wallpaper, tiles.

Load-carrying

Unique Jointing System

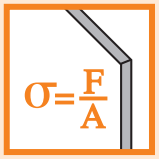

Up to 50 kg per cavity fixing and 30 kg per screw. Eliminates Noggins.

Glued, square edge boards produce a continuous membrane.

Fire Resistant

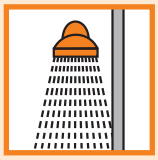

Rigid structure

F 60 from single layer partitions up to 10 m high. Class '0' certification. European class A2.

Certified Racking board.

Moisture Resistant

Rapid finishing

Suitable for humid areas. May be installed before building envelope complete.

Fine Surface Treatment (FST) eliminates plastering trades.

[1] In constructions where only sound insulation is required, mineral wool of a bulk density ≥ 20 kg/m³ can be used.
[3] R_w sound insulation value based on a laboratory test result without flanking sound considerations according to DIN 52210 part 2 and EN ISO 140 part 3.
[4] Calculated value for sound insulation based on DIN 4109 part 5.5.2.
[5] Test certificates from the U.K., Germany and other European countries are available.
[6] Construction 1 S 21 is fire rated to 10 m – please refer to the specific construction sheet for details of stud size, spacing and gauge.
[7] Where separated studs are mechanically braced to each other, the sound insulation figure will change. Contact FERMACELL Technical staff for further information.
[9] Wall thickness, heights and construction properties quoted are for separated steel stud partitions with U channels and C studs fixed parallel to each other and jointed with an isolation strip (for example a self adhesive insulation strip). No mechanical bracing across studs.
[10] Wall thickness, heights and construction properties quoted are for separated steel stud partitions with U channels and C studs fixed parallel to each other without any jointing between the two separated stud sections.
[11] Wall thickness, heights and construction properties quoted are for separated steel stud partitions with U channels and C studs fixed parallel to each other and connected to each other at < ⅓ height with a fillet of board or an off-cut of steel stud.

4 S 32	 Non loadbearing	175 200	3 x 12.5 1 x 0.38 steel sheet		F 90	59 dB without insulation 60 dB with insulation	G 3933/8697

[1] In constructions where only sound insulation is required, mineral wool of a bulk density ≥ 20 kg/m³ can be used.
[3] R_w sound insulation value based on a laboratory test result without flanking sound considerations according to DIN 52210 part 2 and EN ISO 140 part 3.
[4] Calculated value for sound insulation based on DIN 4109 part 5.5.2
[5] Test certificates from the U.K., Germany and other European countries are available.
[16] The quoted improvements in sound insulation are valid for independent wall linings and are individual values for sound reduction in solid walls with an area mass between 135 and 250 kg/m² (R_w 40 dB – 47 dB according to DIN standard 4109 table 1) and are valid for flanking constructions with an area mass of approximately 350 kg/m² or for solid walls with a discontinuous dry lining. For other types of walls and flanking conditions different values will apply.

(1) In constructions where only sound insulation is required, mineral wool of a bulk density ≥ 20 kg/m³ can be used.
(5) Test certificates from the U.K., Germany and other European countries are available.
(41) For roof and ceiling constructions with mineral wool, other types of insulation may compromise the stated fire rating. Where mineral wool is used for fire rating, additional insulation may be added for acoustic purposes without compromising the fire rating.
(42) Test certificates from the U.K., Germany and other European countries are available.

[41] For roof and ceiling constructions with mineral wool, other types of insulation may compromise the stated fire rating.
Where mineral wool is used for fire rating, additional insulation may be added for acoustic purposes without compromising the fire rating.
[42] Test certificates from the U.K., Germany and other European countries are available.

Beam and Column Encasement with FERMACELL

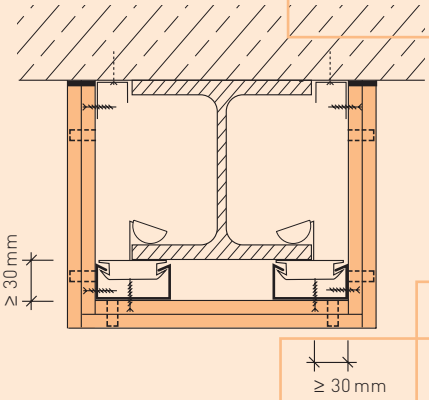

All fixing and jointing must be made in accordance with the FERMACELL Handy Guide.

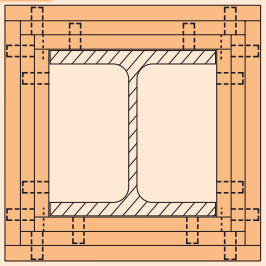

Encasement of a steel support for 4-sided exposure to fire

Single-layer steel beam encasement for 3-sided exposure to fire

2 layer steel beam encasement for 3 sided exposure to fire

3 layer steel beam encasement for 4-sided exposure to fire

Beam Encasement

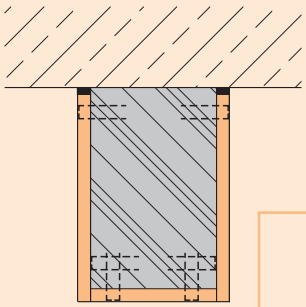

Fire resistance category			
F 30-A	F 60-A	F 90-A	F 120-A
FERMACELL in mm			
10	10 + 10	15 + 12.5	18 + 18

Minimum lining thickness for steel girders with Hp/A ≤ 300 m^{-1}

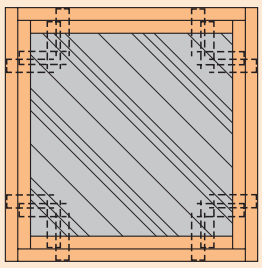

Column Encasement

Fire resistance category				
F 30-A	F 60-A	F 90-A	F 120-A	F 180-A
FERMACELL in mm				
10	2x 10	2x 15 + 1x 12.5	4x 15	5x 15

Minimum lining thickness of steel supports with Hp/A ≤ 300 m^{-1}

1 layer timber beam lining F 30-B for 3-sided exposure to fire

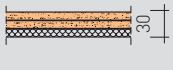

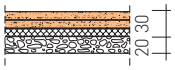

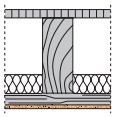

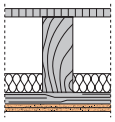

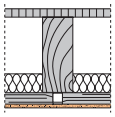

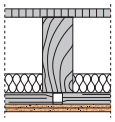

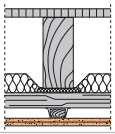

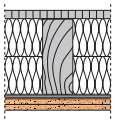

2 layer timber support lining F 60-B for 4-sided exposure to fire

Fire resistance category	
F 30-B	F 60-B
FERMACELL in mm	
10	10 + 10

Minimum lining thickness of timber beams and columns

For details of staples required see the FERMACELL Handy Guide or FERMACELL Orange Book.
For details of Protektor proprietary metal fixing systems contact Cornercare (01562-515200).
Timber grounds may be placed in the web as supports at maximum 400 mm centres.
F 30 constructions with one layer of FERMACELL should be sealed at the edges with an intumescent mastic.
For multiple layer constructions the outer layer should be jointed with FERMACELL Jointfiller or Jointstick.

FERMACELL Dry flooring elements for finished floors – fast

FERMACELL Flooring Systems

FERMACELL Flooring Systems are a dry alternative to conventional wet screed systems and are designed for upgrading both impact and airborne sound insulation in floors, or for increasing thermal performance. They are also particularly suitable for use with warm water Underfloor Heating (UFH) systems and can be used for upgrading the fire protection to the upper surface of a floor construction.

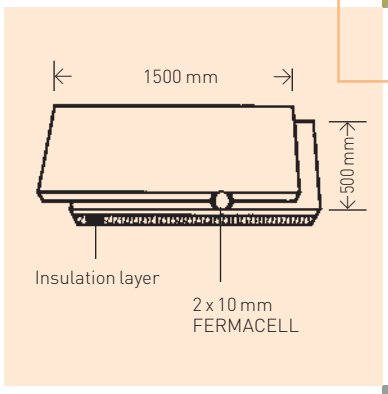

The individual elements are glued and screwed together using a unique staggered jointing system which when set provides a continuous floating floor membrane. The floor can be used within 24 hours of laying.

The finished floor is highly resistant to impact, point and rolling loads. It is also able to accept a wide variety of floor coverings including tiles, carpets and natural floorcoverings, parquet, wood laminates and certain types of solid wood floor. Please refer to our technical manuals for further information.

- No drying out time – available for immediate use.
- Continuous floating membrane – stable substrate for a wide variety of floor coverings.
- Exceeds Building Regulations for impact and airborne sound insulation, when used in conjunction with the correct acoustic ceiling treatment.
- Increases fire protection from above – up to F 90.
- Suitable for use with Underfloor Heating (UFH) systems.
- Easy to handle, simple to lay. Contractor friendly.
- Recycled or renewable materials used. Ecologically friendly.
- In conjunction with FERMACELL granular levelling compound may be used to level uneven floors.

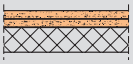

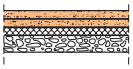

FERMACELL Flooring is designed as a system. A range of accessories and ancillary products are available to further increase the performance of the finished floor. Please call for further details.

	Suggested areas of application
1	Housing and flats, corridors and lofts
2	Offices, corridors and lofts in office buildings, shop floors up to 50 m² area in residential buildings
3	Wards and common rooms in hospitals, lecture halls, class rooms, pubs and restaurants, domestic cellars
4	Surgeries, corridors of hospitals, corridors to lecture halls, meeting rooms of public buildings, churches, theatres and cinemas, dance halls and gymnasia, exhibition and shop floors, office buildings and department stores, libraries and archives

[1] Data relating to the admissible point loading are based on a square loading surface area ≥ 10 cm² and separated by a minimum of ≥ 500 mm. Where point loads are applied within 250 mm of the perimeter of a room the point load should be applied over an area not less than 100 cm². The total floor load must not exceed the designed floor load capacity.

[2] The allowable point loading can be increased by the installation of a third layer of FERMACELL – see "FERMACELL Dry Flooring Elements – Instruction Manual".

[3] Where a greater degree of thermal insulation is required, an increase in the thickness of the insulating layer can be achieved by using the appropriate materials in accordance with the "FERMACELL Dry Flooring Elements – Instruction Manual".

[4] The listed floor constructions with FERMACELL dry flooring have been classified according to DIN 4102 into the respective fire protection class.

[5] When installing underfloor heating systems, a value of 0.09 m² K/W (thermal resistance) must be observed.

FERMACELL:
the very best credentials

Technical and installation support is available as follows:
Tel: +44(0) 870-6 09 03 06
Fax: +44(0) 870-2 40 29 48
Email: fermacell-uk@xella.com
Web: www.xella.co.uk

Our technical support staff are fully qualified to provide detailed technical solutions – usually at the time of your enquiry. Where special detailing or a non-standard solution is required we shall undertake to have given a preliminary answer within 24 hours.

Visits either to your premises or site may be arranged at short notice according to your requirements. Please call our Hotline for further assistance.

Training

FERMACELL is an innovative, high performance product and installation techniques, whilst not difficult, are different to standard dry lining practice. For this reason we recommend that first time users of FERMACELL – either specifiers or installers – contact us for a brief explanation of the main differences in the use of the board. Although this can be usually accomplished by telephone, we always encourage training, and offer on-site training as required.

CPD

Generic, CPD service accredited presentations on the features, benefits and use of Gypsum Fibreboards can be arranged at short notice. These presentations are free and are available to professional and trade bodies, architectural and other building practices as well as schools of architecture and building colleges.

International Certification

FERMACELL is produced to the highest international quality standards – our reputation depends upon it. In addition to the accreditation of our factories to ISO 9001 to ensure consistent product quality, FERMACELL itself has been certified by the bodies show above as well as international equivalent bodies throughout Europe.

Research Led R & D

Being the best doesn't mean you can be complacent. Increasing innovation in building techniques, changes in Building Regulations and requests and suggestions from our customers lead us to develop both new products and methods of application.

Our purpose built R & D centre in the Harz Mountains in Germany has a continuous programme of New Product Development. This is combined with a rigorous testing regime – often in conjunction with the University of Brunswick.

FERMACELL's daily and continued use in thousands of high profile projects worldwide is a testament not only to the product's huge appeal and breadth of application, but also to the service and professionalism of Xella staff in supporting its users. Call us to experience the benefits of FERMACELL for yourself.
